Server events flow

server starts listening

at desired port

server receives message

server emits received message

Mobile device events flow

with server

Client (mobile

opens connection

device)

JS listens

for device

sensor

events

Sensor event

fired

```
const io = require('socket.io')(http);
io.on('connection',
      (socket) =>
  socket.on('message',
            (data) => socket.broadcast.emit('message', data))
```

device

moving

is emitted

message

```
const socket = io.connect(WEBSOCKET_URL)
```

```
lightSensor.addEventListener('reading', () => { ...
```

socket.emit('drawing', message)
